LA GOLDEN ACAPULCO DUB SIREN + DELAY + MIC

There are two ways to make the oscillator sound: Leave it sounding with the manual switch or with the launch button.

You can select between 3 modulation waveforms:
Ramp, triangle, and inverted ramp. You have depth, pitch, and speed control.

The built-in microphone on the back is for using your voice. The audio output goes through the delay, which gives more character. If you shout, it saturates a little like a megaphone.

CONTROLS

- Variable LFO rate
- Variable Pitch
- Variable modulation depth
- 3 waveform
- Automatic/manual switch
- Activation button

DELAY

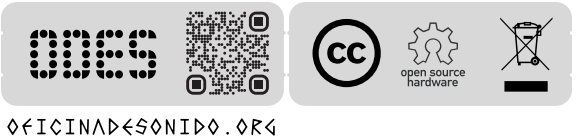
- Time
- Feedback
- Dry/Wet mix.

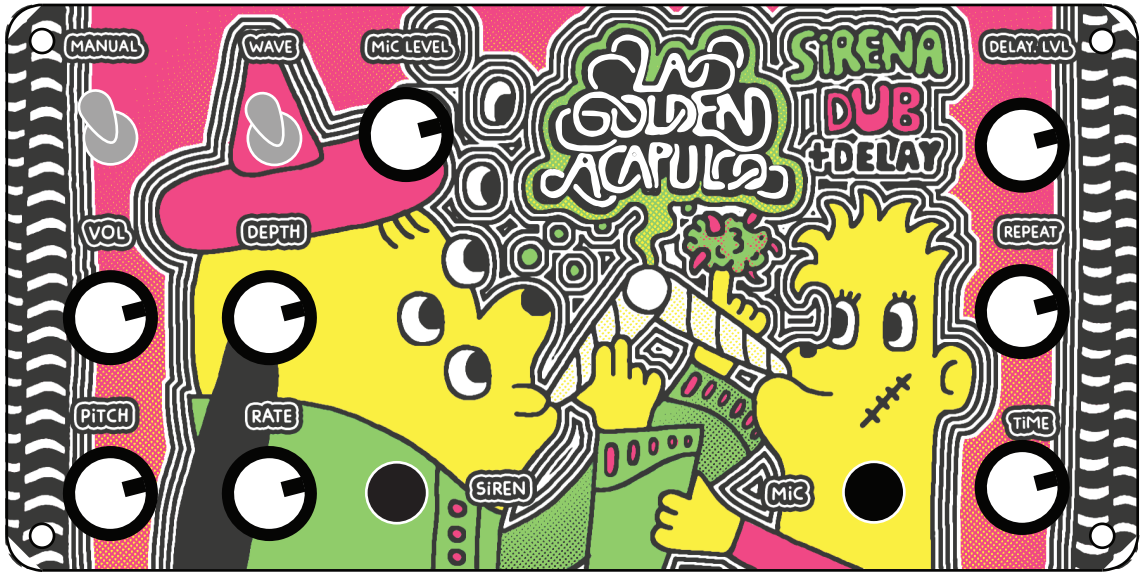
BUILT-IN MICROPHONE

- Volume knob
- Activation button

POWER

You can power the Siren through a USB cable and a cellphone charger or your computer. We recommend the use of 5v and 4.5A Charger for better performance.





DESIGN

La Golden Acapulco is a famous plant mentioned in Los Detectives Salvajes, the classic novel by Roberto Bolaño. This device is illustrated by Pablo Delcielo inspired in the *pirate* illustrations you can fin on latinamerican markets.
